

## Job highlights

Identified by Google from the original job post

### Qualifications

- 

Ideal candidates have a deep understanding of scalable, distributed systems, service-oriented architectures, full-stack web development, and application design, as well as flexibility and a passion for learning new languages/technologies

- 

Successful candidates will have experience with NoSQL AWS data stores like DynamoDB, CloudSearch or their open source equivalents like Cassandra, HBase, Solr or ElasticSearch

- 

Depending on your preferences and expertise, you will own the front-end, back-end, or full stack design and development of product features, building scale, efficiency, and differentiated customer experiences

- 

We're looking for software engineers passionate about building software solutions end-to-end, have strong software development experience delivering at scale solutions, and systems design skills

- 

You should have a demonstrated ability delivering within a DevOps delivery model from requirements analysis, design, development, test, CI/CD, security implementation, and operational excellence with the ability to work cross-functionally with Product Managers, business stakeholders and other tech teams

- 

2+ years of non-internship professional software development experience

- 

Programming experience with at least one modern language such as Java, C++, or C# including object-oriented design

- 

1+ years of experience contributing to the architecture and design (architecture, design

### Responsibilities

- 

You'll work on a new or existing device such as Alexa, Luna, Fire TV, or Echo, while learning new in-demand skills like building voice control interfaces or scalable API platforms

- 

Consumer Technology: Build new generation features and products for amazon.com, constantly improving the customer and seller experience for billions around the globe

- 

Operations Technology: Shape the future of transportation planning and execution on a global scale, that impacts hundreds of fulfillment centers, thousands of Amazonians, and millions of customers across the world

- 

On this entrepreneurial team, you'll build low-latency, middle tier, and backend solutions, as well as identify and evaluate new technology options to solve challenges for point of sale systems

- 

Join Physical Stores to help invent innovative technologies like Just Walk Out, a checkout-free shopping experience which automatically detects when products are taken from or returned to the shelves and keeps track of them in a virtual cart

- 

Books - Goodreads Book Recommendation Engine helps customers find and share the books they love by sharing what friends, family, and members of the community are reading

- 

On the team, you'll build software that delivers a unique, personalized user experience across recommendations, reviews, groups, and more

patterns, reliability and scaling) of new and current systems
